Disclaimer: The information in this Light Paper does not constitute an offer or solicitation to sell shares or securities in Metakalos, the registered Dubai company that runs Kaloscope. This document may be updated due to changes on the Whitepaper or changes in strategic business decisions in the future.

01 OUR VISION

As a Dubai registered entity, with affiliates in the UK, US and Europe, the vision of Kaloscope is to bridge the physical and virtual world by developing mixed reality experiences and utilities within the Non-Fungible Tokens (NFTs) space.

To achieve this, we are building a web3 social media metaverse that will enable you to create and collect virtual spaces as NFTs, and be able to project your NFT collection in Augmented Reality (AR), Virtual Reality (VR), and Extended Reality (XR).

Kaloscope, a subsidiary of Metakalos, provides a solution to more than just storing NFTs in a wallet, we are developing new ways to interact with your digital assets while bringing communities together to build better experiences.

02 FEATURES

Kaloscope combines different features to enhance your NFT experience by expanding beyond what this space has to offer. You will be able to access these features through mobile app, desktop app, website, and/or wearable devices (e.g. Oculus).

With each future iteration, we will continue to develop more functionality and experiences for your NFTs and metaverse identity.

METaverse ECOSYSTEM

We are developing a web3 Kalos Metaverse where within it will include:

- 3D virtual world for everyone to access through the *Kaloscope* desktop/ mobile app
- A place where you can build your own metaverse space and accessories using the *Kalostudio* tools, mint it as an NFT and trade it in decentralized platforms
- A place with limited edition spaces that we can develop for brands, artists, and communities through our *Metaverse Launchpad* program

This ecosystem will be linked together through the use of portals where you can jump from one experience to another.

Digital economies will also be developed from these experiences to allow users to earn while they play.

02 FEATURES

GAMIFICATION

Kaloscope will feature gamification incorporating the use of our utility token:

- **Morphing** - Combine two NFTs to unlock a rarer variant.
- **Crafting** - collect digital resources and craft them into items and accessories (e.g. frames for your NFTs) that can also be sold in the marketplace.
- **Quests** - obtain rewards and gain ranks for playing in mini-games, participating in battles, and other events.
- **NFT Staking** - earn points by holding your collectibles and redeem benefits in the real world, and unlock unique metaverse experiences.
- **Portals** - entrance to your metaverse space. It is a digital asset that provides a unique experience to access metaverse spaces. It is normally morphable by using two common NFTs to unlock a higher rarity, reducing the common circulating supply.
- **Avatars** - 3D figures representing you in the metaverse. Our avatar collection will be combined with an NFT profile picture to extend your identity outside the metaverse.
- **Kalopets** - known to many as metapets, these digital friends with transformation capabilities will keep you company in the metaverse.

NFT COLLECTION

Digital assets where the ownership of the NFT remains with the user in their non-custodial wallet. The Kaloscope NFT collections can include but are not limited to:

- **Metaverse spaces** - 3D virtual property owned and traded as an NFT. These spaces are normally tied to a partnership IP brand through our Metaverse Launchpad.

KALOS PASSES

500 Diamond passes and approximately 900 Gold passes with the following benefits:

- Automatic Whitelisting for all of our drops
- Invitation to Kaloscope App Alpha (Diamond) & Beta (Gold) Launch
- Perks in the real world
- Access to exclusive areas within the Kalos Metaverse
- Exclusive Airdrops
- Invitation to members club in Discord, and more...

03 TOKEN UTILITY

The Kaloscope token is designed to be an ERC-20 utility token that offers various different usages within the Kaloscope ecosystem. Details of the token supply, distribution, price, and vesting period will be provided in the whitepaper.

The following chart provides a summarized illustration of what the token use cases will include.

DEFLATIONARY TOKEN

GAMIFICATION

Morphing, Crafting, Upgrading and Questing, requiring the Kaloscope token as a fee

The token will implement a burn mechanism for purchasing Kaloscope NFTs

BUYING NFTS

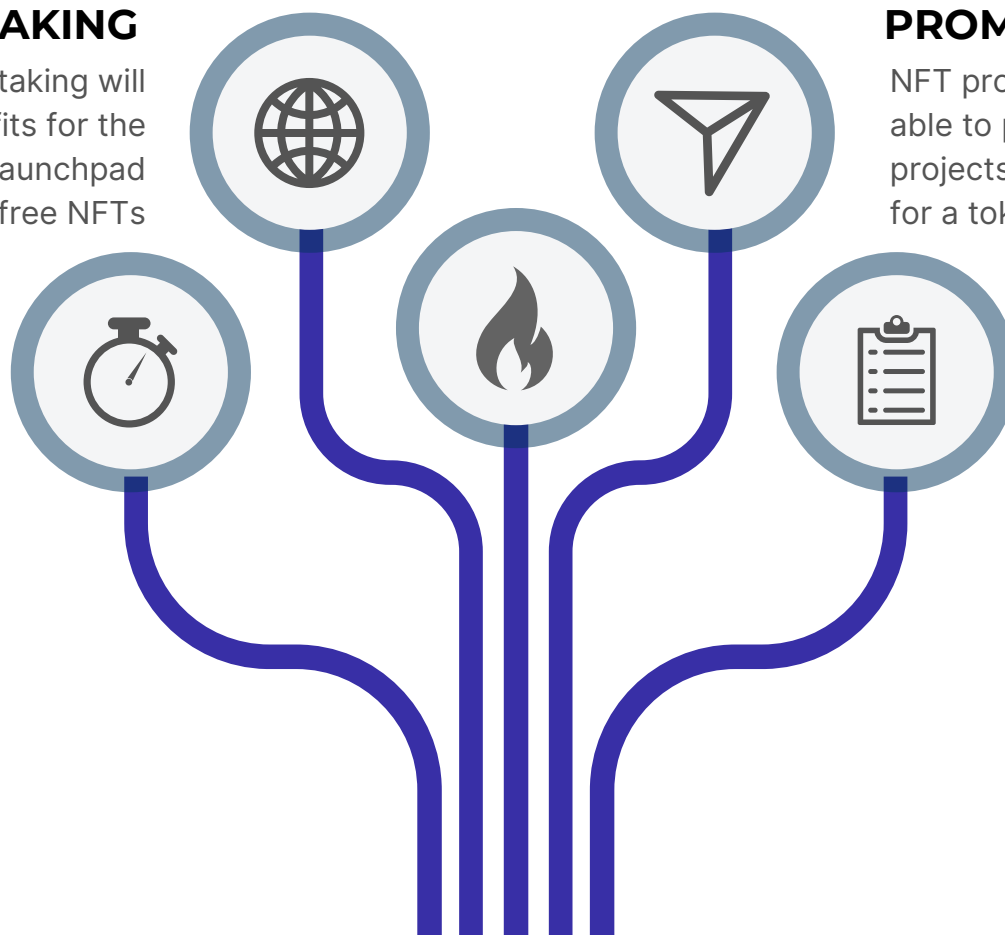

Purchase Kaloscope exclusive NFTs with the token

STAKING

Token staking will provide benefits for the metaverse launchpad and free NFTs

PROMOTIONS

NFT projects will be able to promote their projects in our app feed for a token fee

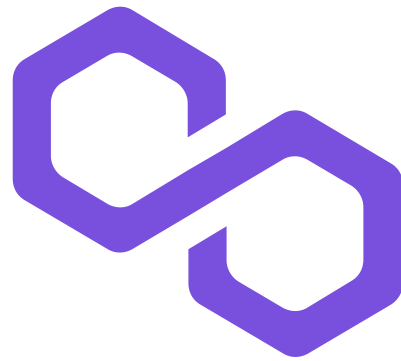

04 TECHNOLOGY & SUSTAINABILITY

The Kaloscope token and NFT contracts will be deployed on the Polygon network which addresses Ethereum's limitations such as notably low throughput, and high gas fees. Polygon can process up to 65,000 transactions per second, making it an ideal candidate for decentralized applications.

SUSTAINABLE BLOCKCHAIN

Polygon is an eco-friendly blockchain scaling Ethereum through a layer 2 Proof of Stake solution. This means that it uses around 44,000x less energy than other blockchains using Proof of Work like Ethereum.

In addition, the network has made a \$20 million sustainability pledge to reduce its carbon footprint and become carbon negative in 2022.

SUSTAINABLE PROJECTS

Kaloscope is supporting the 'Great Green Wall' project, which is one of the largest carbon capture projects on the planet. We have partnered with Serious Shea, which is working collaboratively with the World Economic Forum to plant over 1 trillion trees across Africa, backed by the United Nations.

Revenue generated from this drop - The Great NFTrees, will go towards funding the Great Green Wall project. This NFT drop is scheduled to take place in Q3 of 2022, featuring collectible 3D trees displayed in AR and VR.

ROADMAP

KALOSCOPE

01

Phase 1 - Develop the Kaloscope demo app, secure initial partnerships and licensing deals, launch the Kalos passes Diamond and Gold

PROJECTED DURATION:

Q4 - 2021 (COMPLETED)

02

Phase 2 - NFT pass sale, website launch, and securing additional partnerships.

PROJECTED DURATION:

Q1 - 2022 (COMPLETED)

03

Phase 3 - Light paper V.01 and Whitepaper V.01 reveal, pass holders airdrop, Aradena drop, NFT morphing, NFT.NYC event, Kalos pass staking, and private token sale.

PROJECTED DURATION:

Q2 - 2022 (IN PROGRESS)

04

Phase 4 - Token whitelisting, token pre-sale, public sale, and metaverse launchpad for NFTrees.

PROJECTED DURATION:

Q3 - 2022

05

Phase 5 - Avatar NFT project, Kaloscope app alpha launch (Diamond pass access), and KalCon event.

PROJECTED DURATION:

Q4 - 2022

Disclaimer: Please note that roadmap could be updated due to unforeseen delays or changes due to strategic decisions.
